Umweltinformationen	
Content	Virgin pulp fibres Chemicals
Material	<p>Virgin fibre Virgin pulp fibres are produced out of softwood or hardwood. The process is either sulphite or sulphate delignification, meaning that e.g. lignins and resins are removed from cellulosic material.</p> <p>Bleaching of fibres Bleaching is a cleaning process of the fibres and the aim is to achieve a bright pulp, but also to get a certain purity of the fibre in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety. There are different methods used today for bleaching ECF (elementary chlorine free(where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used.</p> <p>Chemicals The chemicals used in the process as well as the functional chemicals are assessed from an environmental, occupational health and safety and product safety point of view .</p> <p>The used functional chemicals are: Wetstrength agent Dry strength agent Dye = if coloured Fixing agents Fluorescent whitening agent Glue = if used</p> <p>The process chemicals are: Antipitch Protection agent Yankee coating Defoamer Dispersing agents and surfactants pH and charge control Retention aids Broke treatment chemicals Drainage aid</p> <p>Food Contact This product fulfils the legislative requirements for Food Contact materials, confirmed by external certification performed by ISEGA. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.</p> <p>Packaging Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes</p> <p>Environmental label = Ecolabel This product is certified according to FSC</p> <p>Date of issue 2006-06-12 Revision date 2011-09-20</p> <p>SCA Hygiene Products AB, 405 03 Göteborg, SE</p>
